配模♀, 副模4♂♂, 1♀1蛹同正模。

本新种近似小戛蝗 *Paragonista infumata* Willemse 但不同点为: 1. 头顶较长, 其长较大于复眼横径之长, 顶端为圆弧形; 2. 复眼为长卵形, 其纵径约为横径的2倍; 3. 后翅透明本色; 4. 雌性下生殖板后缘的中央为三角形突出; 5. 阳具基背片不同。

**DESCRIPTION OF A NEW SPECIES OF THE GENUS
PARAGONISTA WILLEMSE
(ORTHOPTERA: ACRIDOIDEA: ACRIDIDAE)**

Bi Dao-ying

(Shanghai Institute of Entomology, Academia Sinica)

This present paper describes a new species of the genus *Paragonista* Willemse, which was collected from west Yunnan Province. The type specimens deposited in Shanghai Institute of Entomology, Academia Sinica.

This new species is allied to *Paragonista infumata* Willemse, but differs in:

1. Fastigium of vertex relatively longer than horizontal diameter of eye, with obtuse apex.
2. Eyes long oval, vertical diameter about 2 times as horizontal diameter.
3. Wings hyalinous.
4. Female subgenital plate much longer than broad, posterior margin with a median triangular projection.
5. The shape of epiphallus is different.

Holotype ♂, Allotype ♀, Paratype 4♂♂, 1♀. Yunnan: Xiangyun Co. 1983.
